

Thermo Scientific HyClone Cell Boost 6 is a supplement designed to provide nutrients such as lipids, amino acids, vitamins and growth factors, as part of fed-batch cell culture strategies. Cell Boost 6 has been tested in a variety of cell lines including CHO, Hybridoma, NS0, HEK293 and T-cells.

Thermo Scientific HyClone Cell Boost 6 (CN-T)

Features

- Chemically-Defined
- Animal Derived Component Free
- Protein-Free
- Does not contain L-glutamine or Pluronic® F68
- Manufactured under cGMP

Fed-Batch Supplementation

This formulation was designed for use in many feed formats. Two suggested preparations/applications have been outlined.

Suggested Preparation

1. To 900 mL of cell culture grade water at 20-25°C, add 35g of Cell Boost 6 Powder
2. Stir for 20-30 minutes
3. Adjust pH to 7.0-7.4 if desired
4. Bring volume to 1000 mL
5. Sterile filter with 0.2 µm filter

Note: Due to unique lipid components in Cell Boost 6 the liquid preparation temperature must be maintained higher than 20°C.

Cell Boost 6 can be formulated from 30-60 g/L. It has specific storage, temperature and pH requirements when formulated at higher concentrations.

Suggested Application

Recommended supplementation range is between 20-200 mL/L during mid-to-late growth phase. It is anticipated that this will be day 3 to 4 of the culture.

It is suggested that L-glutamine be monitored separately in those cultures where it is present in the culture medium, and supplemented as needed.

Figure

Production of IgG1 using a proprietary Sp2/0-derived hybridoma cultured in a proprietary serum-free medium (SFM). Fed-batch culture employed on day 3 using HyClone Cell Boost 6 (CN-T).

Ordering Information

The six Cell Boost supplements have been designed to provide such nutrients as amino acids, vitamins, lipids, cholesterol, glucose and/or growth factors in novel combinations for multiple mammalian cell types. Thermo Scientific HyClone Cell Boost supplements are chemically-defined and contain no animal derived components. In addition to the Cell Boost line, we offer concentrated liquid supplements designed to provide lipids and cholesterol to such cell lines as NS0, as well as specific nutrients for those cells using the glutamine synthetase (GS) Gene Expression System.
